

Creative Tools. Enterprise Linux. Zero Compromise.

A Qt-based GUI that gets creative studios and freelance artists onto AlmaLinux — no terminal required.

LOWERING THE FRICTION

A new Qt-based GUI

Onboard students and freelance artists onto Linux — without the terminal dread.

Independent setup

No terminal commands, no manual dependency hunting — a clean visual interface.

Multi-source installs

Handles DNF, Flatpak, RPM and vendor installers automatically.

Enterprise security model

GUI runs unprivileged; Polkit-protected helpers make system changes.

Repo auto-setup

EPEL, CRB, RPM Fusion, Flathub and NVIDIA drivers in one click.

READY IN MINUTES

Install via COPR

```
# AlmaLinux 9 & 10
$ sudo dnf copr enable \
  tristantheroux/\
  AlmaLinux-Creative-Installer
$ sudo dnf install \
  almalinux-creative-installer
```

v2.0.1 stable on COPR · auto-updates with the system

v2.0.2 pre-release — +6 new creative apps

Secure by design, not by trust

The GUI never runs as root. It asks the system to make privileged changes the same way official tools do — so IT can sign off without exceptions.

Unprivileged GUI

Runs as your user. No root, ever.

Polkit checks the action

Authorizes each privileged task by policy.

Helper does the work

A small, audited helper applies the change.

WHY IT MATTERS

Same model as system tools

PackageKit, GNOME Software and friends work exactly this way.

Auditable surface

Privilege lives in small helpers, not a sprawling root GUI.

Enterprise sign-off

Nothing for IT to whitelist as a root application.

LIVE DEMO

The Creative Installer, in action

DEMO RUN-SHEET

1. Launch from the menu

No terminal — it appears as a normal app.

2. Enable repos in one click

Show EPEL / CRB / RPM Fusion / Flathub / NVIDIA toggles.

3. Pick an app — install Blender

Point out the Polkit prompt: GUI stays unprivileged.

4. Show the multi-source pick

DNF vs Flatpak vs vendor RPM, chosen automatically.

THE CATALOG

40+ apps across every creative discipline

8

Image & Illustration

GIMP · Krita · Inkscape · darktable

11

Video & Motion

DaVinci Resolve · Kdenlive · Natron · OBS

7

3D & Modeling

Blender · FreeCAD · PrusaSlicer · 3DCoat

7

Audio & Music

Ardour · Bitwig · Audacity · LMMS

3

Game Development

Godot · Epic Asset Manager

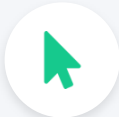

10

Productivity & Comms

Scribus · LibreOffice · draw.io

How we test — the coverage matrix

Every release is validated across enterprise bases and the two major desktops, so the installer behaves the same wherever an artist lands.

	GNOME	KDE Plasma	EACH PASS VERIFIES	
AlmaLinux 9	Validated	Validated		GUI launches & renders On both X11 and Wayland sessions.
AlmaLinux 10	Validated	Primary focus		Every install path DNF, Flatpak, RPM and vendor flows.
				Repo + driver setup EPEL, CRB, RPM Fusion, Flathub, NVIDIA.

THANK YOU
